| Filter Settings |             |           |         |          |        |
|-----------------|-------------|-----------|---------|----------|--------|
|                 | Filter Type | Frequency | Gain    | Q-Factor | BW / S |
| Band 1          | PEAK        | 20 Hz     | 2,5 dB  | 1,0      | 1,39   |
| Band 2          | LOW_SHELF   | 100 Hz    | 8,5 dB  | 0,7      | 0,34   |
| Band 3          | PEAK        | 210 Hz    | -0,8 dB | 2,0      | 0,71   |
| Band 4          | PEAK        | 2800 Hz   | -0,7 dB | 4,0      | 0,36   |
| Band 5          | PEAK        | 5000 Hz   | 4,2 dB  | 3,0      | 0,48   |
| Band 6          | PEAK        | 5980 Hz   | -4,6 dB | 5,0      | 0,29   |
| Band 7          | PEAK        | 7400 Hz   | 1,0 dB  | 6,0      | 0,24   |
| Band 8          |             |           |         |          |        |
| Band 9          | PEAK        | 3650 Hz   | 1,5 dB  | 6,0      | 0,24   |
| Band 10         |             |           |         |          |        |

|                       |          |
|-----------------------|----------|
| Preamp gain:          | -11,0 dB |
| Deviation from Target |          |
| Before EQ             | 1,91 dB  |
| After EQ              | 0,33 dB  |
| Preference Rating*    |          |
| Before EQ             | 83/100   |
| After EQ              | 107/100  |

\*preference rating prediction based on:

- [1] S. Olive et al: "A Statistical Model That Predicts Listeners' Preference Ratings of In-Ear Headphones: Part 1" (2017)
- [2] S. Olive et al: "A Statistical Model That Predicts Listeners' Preference Ratings of In-Ear Headphones: Part 2" (2017)
- [3] S. Olive et al: "A Statistical Model That Predicts Listeners' Preference Ratings of Around-Ear and On-Ear Headphones" (2018)

The normalized preference ratings are used, where zero deviation from target equals a preference rating of 100
